Index to Volume 123

ALERSTAM, T. (see LUNDBERG, S.), 403
Allosteric enzymes, kinetic meaning of $I_{0.5}$ and $A_{0.5}$ values in (letter), 499
Amiloride blocking and an apical sodium channel. Exploration of apical sodium transport mechanisms in an epithelial model, 1
ANDERSON, J. J. and SULLIVAN, P. J., A dynamic basis for using a truncated normal distribution to describe variability of chemical substances in aquatic environments, 213
ANDO, H. Y. (see SCHULTZ, T. W.), 367
Apical sodium transport mechanisms, exploration in an epithelial model by network thermodynamic simulation of the effect of mucosal sodium depletion. Comparison of three apical sodium permeability expressions, 1
Apical sodium transport mechanisms, exploration in an epithelial model by network thermodynamic simulation of the effect of mucosal sodium depletion. An apical sodium channel and amiloride blocking, 21
Aquatic environments, a dynamic basis for using a truncated normal distribution to describe variability of chemical substances in, 213
Assortment of encounters in the two-strategy game, 193

BAAKE, M. and BUFF, E., From cell growth to root growth, 347
BAT, O. G. (see KHANIN, M. A.), 251
BELL, G. (see GILLIS, D. M.), 281
BEZEAU, M. and ENDRENYI, L., Design of experiments for the precise estimation of dose–response parameters: the Hill equation, 415
BINGGELI, R. and WEINSTEIN, R. C., Membrane potentials and sodium channels: hypotheses for growth regulation and cancer formation based on changes in sodium channels and gap junctions, 377
Biological systems, chemical dynamic approach to synergetics and instability in, 187
Bisoynthetic reactions in plant cells, are they thermodynamically coupled to glycolysis and the tonoplast proton motive force?, 231
Bird migration patterns: conditions for stable geographical population segregation, 403
Body size and metabolic rate: calculated exponents are independent of the units used (letter), 125
Breeding earlier, why it is always worthwhile, 311
BREMER, H. and LIN-CHAO, S., Analysis of the physiological control of replication of colE1-type plasmids, 453
BROWN, J. S. and ROSENZWEIG, M. L., Habitat selection in slowly regenerating environments, 151
BUFF, E. (see BAAKE, M.), 347

CALOW, P. (see SIBLY, R.), 311
Cancer formation and growth regulation, hypotheses based on changes in sodium channels and gap junctions, 377
CARTWRIGHT, M. and HUSAIN, M., A model for the control of testosterone secretion, 239
Catalysis: progress curves of reactions catalyzed by unstable enzymes; a theoretical approach, 67
Catalysis, RNA, and the origins of life, 127
Catalytic efficiency, kinetic co-operativity of oligomeric enzymes and evolution, 431
Cell growth to root growth, 347
Cell, plant, cryoprotectants, classification of, 305

Cells, excitable, high frequency electrostimulation of, 45
Cells, plant, are biosynthetic reactions thermodynamically coupled to glycolysis and the tonoplast proton motive force?, 231
Chemical dynamic approach to synergetics and instability in biological systems, 187
Chemical substances in aquatic environments, a dynamic basis for using a truncated normal distribution to describe variability of, 213
CHICHILNISCKY, E. J., A mathematical model of pattern formation, 81
CLARK, S. J., ESS equations sometimes do not specify an ESS, 325
Classification of plant cell cryoprotectants, 305
Coalitions, kin, and social dominance, 55
Codon changes, single, advantages to mutagenesis techniques generating populations containing the complete spectrum of, 261
ColE1-type plasmids, analysis of the physiological control of replication of, 453
Conflict, parent-offspring, in seed germination, 173
Conflicts among megaspores, 471
Conformation of glycosphingolipids, calculation for G_{M1}- and G_{M2}-gangliosides, 221
Control, physiological, of replication of colE1-type plasmids, analysis of, 453
Control of testosterone secretion, a model, 239
Cryoprotectants, plant cell, classification of, 305
Crystals, general, proteins as (letter), 121
Culture, growing, the basis of synchronization by repetitive dilution of, 333

Diffusional transport in lipid membranes, relationship to a lipophilic-eutectic parameter, 367
Dilution, repetitive, of a growing culture, the basis of synchronization by, 333
Dimorphisms, germination, and parent-offspring conflict in seed germination, 173
Dominance, social, and kin coalitions, 55
Dose-response parameters, design of experiments for the precise estimation of; the Hill equation, 415
Dry matter partitioning and height growth in trees, implications of the pipe model theory on, 103
DUGGLEBY, R. G., Progess curves of reactions catalyzed by unstable enzymes. A theoretical approach, 67
Dynamic basis for using a truncated normal distribution to describe variability of chemical substances in aquatic environments, 213
Dynamic chemical approach to synergetics and instability in biological systems, 187

Electrostimulation, high frequency, of excitable cells, 45
Encounters in the two-strategy game, assortment of, 193
ENDRENYI, L. (see BEZEAU, M.), 415
ELGSAETER, A. (see STOKKE, B. T.), 205
ELLNER, S., Germination dimorphisms and parent-offspring conflict in seed germination, 173
Environment, patchy, central-place foraging in, 35
Environments, aquatic, a dynamic basis for using a truncated normal distribution to describe variability of chemical substances in, 213
Environments, slowly regenerating, habitat selection in, 151
Enzymes, allosteric, meaning of $I_{0.5}$ and $A_{0.5}$ values in (letter), 499
Enzymes, oligomeric, kinetic co-operativity of, and evolution, 431
Enzymes, unstable, progress curves of reactions catalyzed by; a theoretical approach, 67
Epithelial model, exploration of apical sodium transport mechanisms by network thermodynamic simulation of the effect of mucosal sodium depletion, 1, 21
Erythrocyte, human, membrane skeleton may be an ionic gel. Micropipette aspiration of unswollen erythrocytes, 205
ESS equations do not specify an ESS, 325
Evolution, catalytic efficiency, kinetic co-operativity of oligomeric enzymes and, 431

Foraging, central-place, in a patchy environment, 35
Fretwell's ideal free distribution, Taylor's power law as a consequence of, 281

G_{M1}- and G_{M2}-gangliosides, calculation of conformation, 221
Game, two-strategy, assortment of encounters in, 193
Gap junctions, hypotheses for growth regulation and cancer formation based on changes in sodium channels and, 377
Germination dimorphisms and parent–offspring conflict in seed germination, 173
Germination model: responses to time and temperature, 481
GILLIS, D. M., KRAMER, D. L. and BELL, G. Taylor's power law as a consequence of Fretwell's ideal free distribution, 281
Glycolysis and the tonoplast proton motive force, are biosynthetic reactions in plant cells thermodynamically coupled to?, 231
Glycosphingolipids, calculation of conformation for G_{M1}- and G_{M2}-gangliosides, 221
GREEN, R. F. and NUNEZ, A. T., Central-place foraging in a patchy environment, 35
Growing culture, the basis of synchronization by repetitive dilution of, 333
Growth: from cell growth to root growth, 347
Growth, height, in trees, implications of the pipe model theory on dry matter partitioning and, 103
Growth regulation and cancer formation, hypotheses based on changes in sodium channels and gap junctions, 377

Habitat selection in slowly regenerating environments, 151
HAIG, D., Conflicts among megaspores, 471
Height growth in trees, implications of the pipe model theory on dry matter partitioning and, 103
High frequency electrostimulation of excitable cells, 45
Hill equation: design of experiments for the precise estimation of dose-response parameters, 415
Homeotherms, optimal lower critical temperature and thermal insulation of, 251
HUGHES, A. L., Kin coalitions and social dominance, 55
Human erythrocyte membrane skeleton may be an ionic gel. Micropipette aspiration of unswollen erythrocytes, 205
HUSAIN, M. (see CARTWRIGHT, M.), 239
HUXLEY, J. R., A possible explanation for the symbolic nature of language, 321

Instability in biological systems, chemical dynamic approach to synergetics and, 187
Ionic gel, the human erythrocyte membrane skeleton may be an; micropipette aspiration of unswollen erythrocytes, 205

KHANIN, M. A. and BAT, O. G., Optimal lower critical temperature and thermal insulation of homeotherms, 251
Kin coalitions and social dominance, 55
Kinetic co-operativity of oligomeric enzymes and evolution, 431
